

Globally search for  
Regular  
Expression and  
Print out

```
$ grep "grades" OS.txt
```

Start working on  
the code of new  
project

So many files!!!  
This will take ages to  
understand the  
execution flow....

**GREP**  
???

Why don't you  
use  
**GREP!!!**

# What's GREP???

**GREP** is a command line tool for searching plain-text data for strings which match a given regular expression.

**Basic Syntax :** grep [OPTION...] PATTERNS [FILE...]

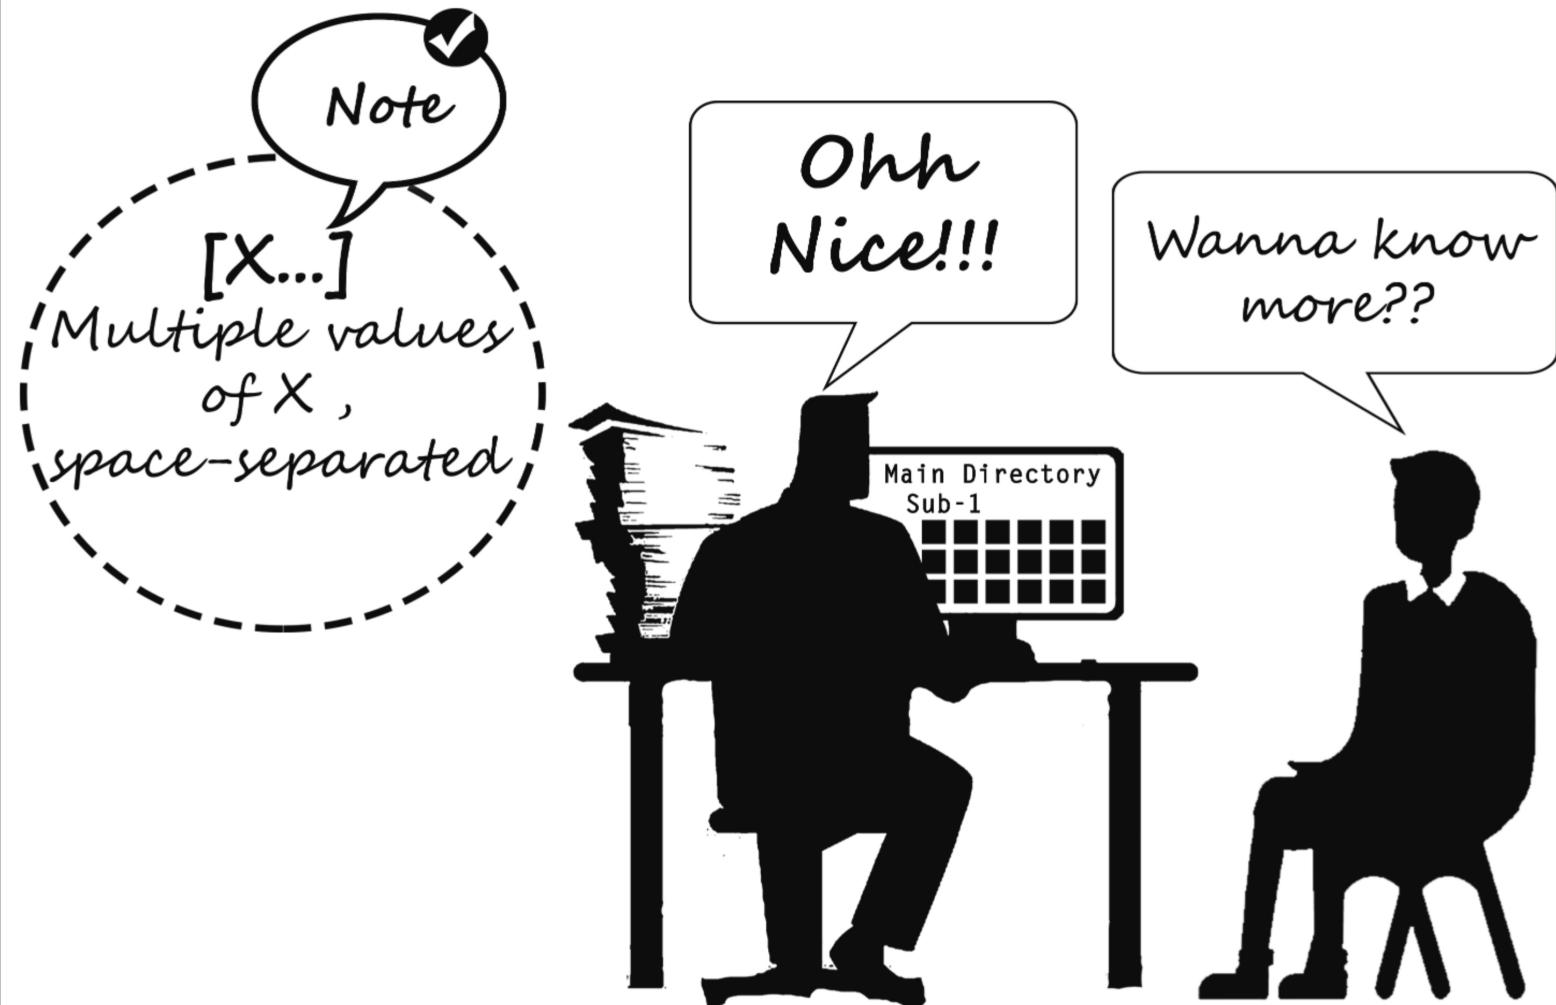

Greptest.txt

OS is great. It is offered in IITGn under the guidance of Prof. Nipun Batra. OS comes under the systems part of IITGn's CSE curriculum.  
Everyone should try to experience it once in his/her life.

```
$ grep "OS" Greptest.txt
```

**Output:** **OS** is great. It is offered in IITGn under the guidance of Prof. Nipun Batra. **OS** comes under the systems part of IITGn's CSE curriculum.

Let's explore some  
OPTIONS

**-f**

Grabs patterns from a file  
line-by-line.

File containing  
list of patterns

Greptest.txt Patterns.txt

```
$ grep -f Patterns.txt Greptest.txt
```

Output: **OS is** great. It **is** offered in **IITGn** under the guidance of Prof. Nipun Batra. **OS** comes under the systems part of **IITGn**'s CSE curriculum.

**-i**

Does case-insensitive matching.

**-n**

Displays the line number of matched strings

**-c**

Prints the count of matched strings

**-l**

Displays the list of files that contains a matched string

**-v**

Displays all the lines that do not contain any matched string

```
$ grep -v "OS" Greptest.txt
```

Output: Everyone should try to experience it once in his/her life.

I will have to mention all of the file-names in the command

There is an option for that as well!!

**-r** Searches the pattern in all the files and sub-directories of directory recursively

Current Directory

Sub

Greptest.txt

Patterns.txt

Note

\$grep Pattern \*  
Searches only in text files of the current directory

:/Current Directory\$ grep -r "OS"

Output:

Greptest.txt: **OS** is great. It is offered in IITGn under the guidance of Prof. Nipun Batra. **OS** comes under the systems part of IITGn's CSE curriculum.

Patterns.txt: **OS**

Thanks  
drinks are on  
me tonight!!!

You can explore  
it more using  
**\$man grep** or  
**\$ grep --help**
