

YEAH! Covid is over
Finally!!
Night Full of Stars, just have to MOUNT my binoculars on tripod

LADAKH
Okm

HMM... Even Operating Systems can MOUNT File systems.

LET ME EXPLAIN

```

graph TD
  ROOT["ROOT /"]
  ROOT --- BIN["/bin"]
  ROOT --- DEV["/dev"]
  ROOT --- LIB["/lib"]
  ROOT --- MNT["/mnt"]
  ROOT --- OPT["/opt"]
  ROOT --- USB["/usr"]
  ROOT --- MEDIA["/media"]
  
```

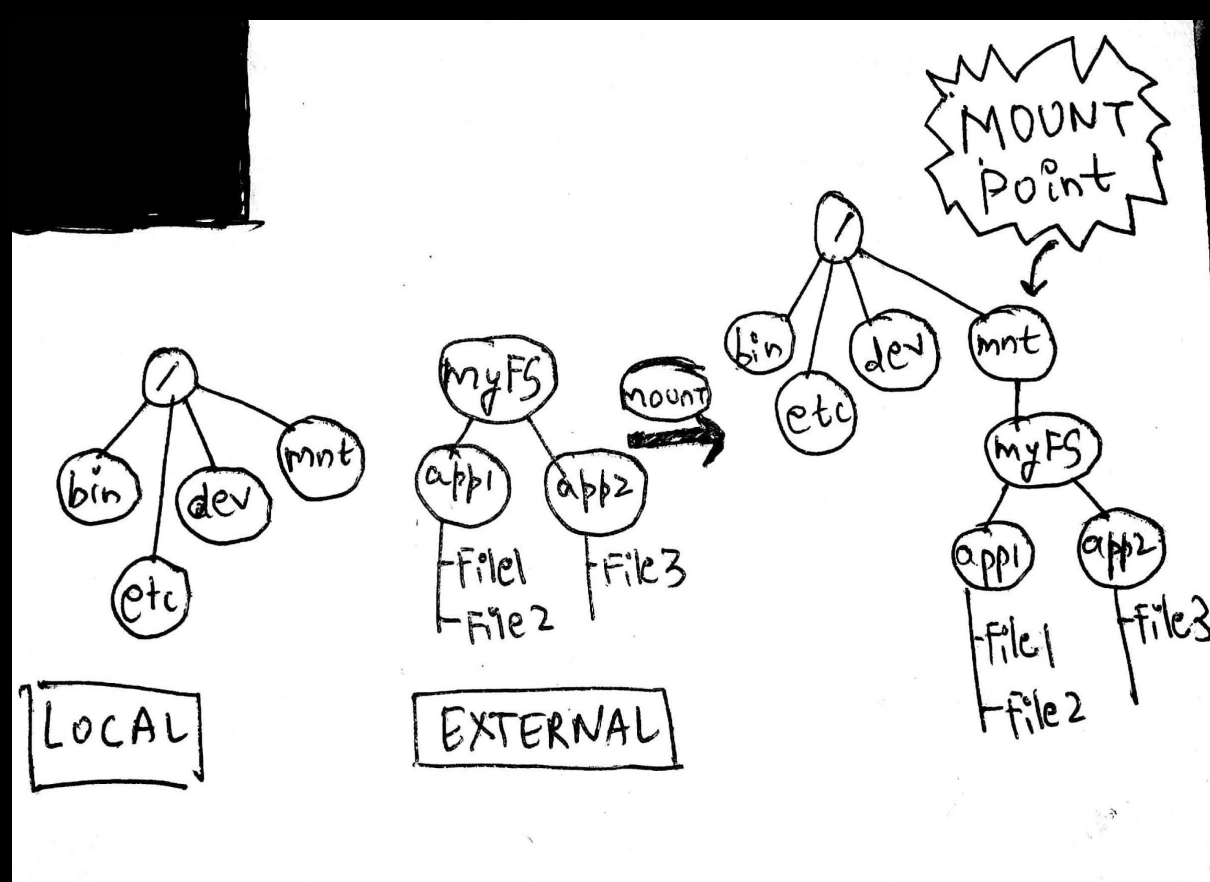

WHAT IF I want to read/write File systems not on my DISK?

PRESENTING **MOUNT**

Attaching External File System to local File System is termed **MOUNTING**

- OVER NETWORK
- EXTERNAL DEVICE

Files and directories are arranged in tree like structure in disk, so that operating system can read or write.

```
$ mount DEVICE-NAME MOUNT-POINT
```

* Add Prefix "sudo" if you are not privileged!

DON'T FORGET TO CREATE MOUNT POINT FIRST

```
$ man mount
```

KNOW MORE

HEY! wait for me...
