

Nohup Command

Aditya Pusalkar - 18110009
Pushkar Mujumdar - 18110132

*Wow, my two hour download
has almost finished! I am so
excited to use this program!
Let's show it to my friend.*

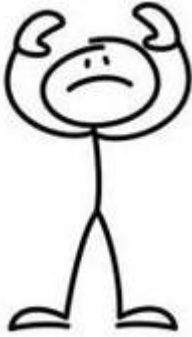

*Aww man, it logged off?
It took so long to get
here, now I have to
wait again for hours....*

*I think you forgot about
the HUP signal, which
triggers on logout.*

*Ohh What's that?
And how do I make sure
it doesn't happen again?*

*A HUP signal means Hang Up
signal. It is sent to a process
when it's controlling terminal is
closed.
And to make sure it doesn't
happen we can use NOHUP.*

*Let's see the
manual for
NOHUP*

```
NOHUP(1)                                User Commands                                NOHUP(1)

NAME
    nohup - run a command immune to hangups, with output to a non-tty

SYNOPSIS
    nohup COMMAND [ARG]...
    nohup OPTION

DESCRIPTION
    Run COMMAND, ignoring hangup signals.

    --help display this help and exit

    --version
        output version information and exit

    If standard input is a terminal, redirect it from an unreadable file.
    If standard output is a terminal, append output to 'nohup.out' if possible,
    '$HOME/nohup.out' otherwise. If standard error is a terminal, redirect it
    to standard output. To save output to FILE, use 'nohup COMMAND > FILE'.

NOTE: your shell may have its own version of nohup, which usually supersedes
the version described here. Please refer to your shell's documentation for
details about the options it supports.
```

```
pushkar@pushkar-HP-Pavilion-Laptop-15-cc1xx:~/Desktop$ nohup sh test.sh &  
[1] 11626  
pushkar@pushkar-HP-Pavilion-Laptop-15-cc1xx:~/Desktop$ nohup: ignoring input and  
_appending output to 'nohup.out'  
□
```

*And this is how
we use NOHUP.*

That's pretty cool!

Some tips and nuances about nohup:

- *Output is not shown while executing any process on the terminal.*
- *Input cannot be provided to any programs, until specified through an external file.*
- *To kill the process, we have to use the 'kill' command on the terminal, or manually close it using a task manager.*

Thanks bro!

You're welcome!
