

**SFTP** SSH File Transfer Protocol

**Basic commands of SFTP**

1. put - Send files from Local machine to the remote server
  2. get - Downloads files from remote server to the local machine
  3. quit / bye - To disconnect and quit SFTP
- All other Linux directory commands like ls, cd, mkdir, pwd are to be used for **REMOTE MACHINE DIRECTORY**  
For **LOCAL DIRECTORY** add l in front of them (example ll, lcd)

```
sftp [user]@host
for example - sftp sftp://viraj@192.168.29.158:2222
```

~ The End ~
