

TRACEROUTE

TYLER

CAMEROON

THE YEAR 2030 AT IIT GN :

HEY CAM!
ANY IDEA....WHY THAT
DAMN IMS IS NOT
OPENING....

I AM NOT ABLE TO REGISTER MY
COURSES!!! MY WIFI IS WORKING
FINE AND NEITHER ARE THERE ANY
ERRORS DISPLAYED.

THERE WAS A PROBLEM
10 YEARS AGO AT IITGN.
BUT IT WAS RESOLVED...

UMMM... I GUESS
SOME PACKETS MUST
HAVE DROPPED
SOMEWHERE
ALONG THE PATH...
TRY **TRACEROUTE**

FEW MOMENTS LATER:

I JUST ASKED MY ISP TO SEND
A TRACER TO IITGN. THEY HAVE
NOT REPLIED YET ...[SIGHS]. IT
WOULD TAKE DAYS!

BRUHHH.....

IT IS TRACE-ROUTE AND NOT TRACER-OUT
(LAUGHS)... YOU CAN SIMPLY USE
TRACEROUTE TO TRACE THE ROUTE THROUGH
WHICH YOUR REQUEST IS GOING TO THE DNS
AND COMING BACK TO YOU.

CAMEROON: OPEN THE COMMAND PROMPT AND WRITE THE FOLLOWING LINE:

```
C:\Users\Tyler>tracert ims.iitgn.ac.in
Tracing route to ims.iitgn.ac.in [14.139.98.79]
over a maximum of 30 hops:

  0  5 ms    3 ms    2 ms    192.168.1.1
  1  *        *        *        Request timed out.
  2  17 ms   15 ms   15 ms   [59.185.211.249]
  3  16 ms   15 ms   15 ms   [59.185.211.250]
  4  16 ms   16 ms   17 ms   [115.114.89.125]
  5  18 ms   18 ms   18 ms   [115.113.165.62]
  .
  .
  .
 13  26 ms   26 ms   25 ms   ims.iitgn.ac.in [14.139.98.79]
```

WHAT ARE THOSE NUMBERS?
THE COLUMNS SEEM TO BE SOME
IP ADDRESSES. THIS SEEMS SO
CONFUSING !!!

TRACEROUTE HELPS IN FINDING THE EXACT PLACE
WHERE THE PROBLEM IS OCCURING.
SEE... THE PACKETS (REQUEST) SENT BY YOU TO
THE DESTINATION **HOPS** THROUGH MANY ROUTERS

THE FIRST COLUMN IS THE **TTL** OF THE PACKET SENT.
TRACERT SENDS THREE REQUEST FOR A ROUTER
AND PRINTS THE **DELAY** FOR THE THREE REQUESTS.
THE LAST COLUMN DENOTES **IP ADDRESS** OF EACH
ROUTER.

https://commons.wikimedia.org/wiki/File:Router_symbol-Blue.svg

https://www.freepik.com/free-vector/technological-devices-design_953322.htm#page=1&query=computer&position=2

TTL

TTL STANDS FOR TIME TO LIVE.
IT IS THE MAXIMUM NUMBER OF TIMES
A PACKET WOULD HOP TO GET TO THE
DESTINATION BEFORE GETTING DROPPED
BY A ROUTER

DELAY

IT IS THE AMOUNT OF TIME TAKEN
BY A PACKET TO REACH THE REQUIRED
ROUTER AND COME BACK TO THE
SOURCE

CAMEROON: THERE ARE OTHER FUNCTIONALITIES IN TRACERT AS WELL:

THE MAIN SYNTAX OF TRACERT IS:

```
tracert -d -h -j -w target_host
```

-d

Not to resolve the IP address to host names

-h

It is the maximum number of hops that a packet would take before getting dropped (30 hops by default)

-j

Tells the loose source route along the host list

-w

Waits for the reply from the router in milliseconds before printing timeout

target_host

Is the target/destination upto which, you want to send your packet to.

NOTE: For Linux, traceroute is to be used instead of tracert

CAMEROON: IF THE PACKET IS DROPPED BY A ROUTER, THE FEEDBACK IS SENT BACK TO THE YOU. AND THUS YOU FIND THE PLACE WHERE THE PROBLEM IS

BUT THE TRACEROUTE COMMAND
IS NOT SHOWING ANY ERROR

THIS MEANS THAT ALL THE ROUTERS IN THE PATH
ARE WORKING FINE RIGHN NOW. MAYBE THERE
WAS TOO MUCH TRAFFIC EARLIER WHICH MADE
THE PROCESS SLOWER.
TRY AGAIN AFTER SOME TIME

AFTER WAITING FOR 15 MINUTES, TYLER FILLS HIS COURSES:

IT WORKED! DONT HAVE TO
WAIT FOR MY ISP'S REPLY
THE NETWORK WAS FINE

YOU ARE SO COOL

BRO!!!

NOW I GET IT WHY AMANDA
DONT RECEIVE ANY OF
MY MESSAGES AND WHY I
CANT SEE HER PROFILE PHOTO

(((SIGHS)))..WHO WILL TELL
THIS DUMBO THAT SHE HAS
BLOCKED HIM
